

# **ECI Connector for AEM Quick Start Guide**

November 30, 2020

## Install in AEM Package Manager

Log in to AEM with your administrator credentials.

1. Locate CRX Package Manager from the AEM menu.
2. Click Upload Package.
3. Browse to the connector package that you acquired from ECI AEM, select **Force Upload**, and then click OK.
4. Click the Install button for the package, then again in the resulting dialog.
5. Once installed, and the services start, return to the AEM home screen and refresh the page.

## AEM Connector Features Introduction

- Connector function introduction

In the ECI integrated market, customers' demands for automated processing of AEM and website localization have deeply customized the AEM Connector for AEM. Users can easily and conveniently implement the following functions:

1. Select the language pair and the pages and components to be translated to create a translation project, and send a request to Vendor for inquiry.

2. The Connector will automatically upload the translated content to the Vendor and give a quotation list listing the cost details. Finally, the customer can view the quotation details in the Connector and authorize the Vendor to translate.

- Support the comment function. For pages or components with translation problems, customers can comment in AEM and automatically send them back to Vendor through the Connector for timely modification by translators. Support multiple uploads. Customers can comment on each submission and accept or reject translation. Each post will overwrite the last content.

- Support preview function. Customers can preview the translation effect on the web through the preview function supported by AEM.

The screenshot shows a web interface for managing translations. At the top, there are buttons for 'Reveal in Sites', 'Preview in Sites' (circled in red), 'Accept Translation', and 'Reject Translation'. Below this is a header for 'Translation Job [FR]' with a 'Select All' button. The main content is a table with the following columns: Title, Path, Status, State, and Resource Type. The table contains four rows of data:

| Title             | Path  | Status | State            | Resource Type   |
|-------------------|---|--------|------------------|-----------------|
| Rios T Shirt      | /content/we-retail/language-masters/fr/products/women/shirts/rios-t-shirt | New    | Ready for review | Page            |
| Assets Metadata   |   | New    | Ready for review | Assets Metadata |
| Tags Metadata     |   | New    | Ready for review | Tags Metadata   |
| Component Strings |   | New    | Ready for review | i18n Dictionary |

## Process Advantage

AEM Connector and related processes have the following advantages:

1. Directly generate translation orders for relevant pages in the background of the website, and no content omission will occur.
2. By transferring the file back to the background and applying it, the time required for subsequent processing is reduced.
3. The number of access files can be freely controlled, which increases flexibility, and the more pages that are processed, the more the advantages of automated batch processing can be reflected.
4. Practical functions such as quotation approval, preview translation, and evaluation translation are convenient for users to operate website localization projects in one-stop automation.
