Perfecting Checkout

Bolt brings a dynamic fraud and checkout experience to **Magento**, the leading platform for Enterprise retailers. As a Premier technology partner, Bolt is flexibly designed as an all-in-one, fully compatible plug-in for Adobe Experience Cloud.

10x more data

Over 200 variables collected in real-time for each order holistically inform our fraud decisioning (vs. 30-45 variables from leading competitive solutions today).

Built for speed

Bolt Checkout for Magento performs 3x faster than the platform's average, saving shoppers 40+ seconds to purchase.

Best checkout experience

A personalized single-click buying experience builds loyal customers while consolidating your checkout, fraud detection and payment processing technology.

Mobile optimized

Our simply designed product-page flow results in mobile completion rates of ~33%—over 2X the industry average.

Increased LTV

Dynamic discount and up-sell functionality combined with single-click return checkout = increased average order value (AOV), loyalty, and overall customer lifetime value (LTV).
Powerful fraud detection

Don't make a tradeoff between conversion and risk. Bolt's superior fraud detection approves more good orders (all while we cover 100% of your fraudulent chargebacks).

Perfecting Checkout

Bolt is the Premier Checkout Experience Platform for **Magento** — designed to give retailers the freedom to focus on their brand while Bolt perfects the purchase.

Lightning-quick checkout to convert more shoppers into paying customers

Say goodbye to unnecessary fields and slow load times while giving your shoppers a world-class checkout experience—designed for any device. Bolt's **dynamically optimized checkout flow** + **single-click functionality** makes it easy to reduce friction and strengthen loyalty for a better overall customer experience—on average, 3x faster than Magento's standard checkout.

Options for growth and flexibility are key to retain a customer's loyalty

A Premier technology partner, Bolt is flexibly designed as an all-in-one, fully compatible plug-in for Magento. Bring your **checkout, fraud detection, and payment processing under one roof** via The Bolt Platform, while utilizing our pre-built integrations with best-in-class technology solutions to help **scale your business, future-proof your approach,** and **simplify your tech stack**—all without sacrificing quality.

Proprietary fraud model to approve more good orders

Checkout + Fraud are better together. Bolt's integrated fraud detection solution gathers 4x the real time data signals to allow you to confidently **approve more good orders** while helping you **stay protected from fraud**. By linking checkout and fraud, we can also remove unnecessary fields that are used to validate a shopper, creating a faster more streamlined checkout. We're so confident in our models that we offer to **cover 100% of fraudulent chargebacks**.[1]

1. Additional fees apply for fraudulent chargeback coverage

PREMIER TECHNOLOGY PARTNER   Bolt

Bolt Approve for Adobe retailers

Improved fraud prevention should fuel your growth, not impede it. With our industry leading approval rates and a 100% fraud chargeback guarantee, you never have to worry about the cost of fraud again.

Why Bolt for Fraud Protection?

Other fraud prevention solutions rely on a rules-based strategy or train their models solely on historical data. With Bolt, we use key facets of these approaches, but go one step further by training our models on the most behavioral data signals in the market. We collect **200+ signals** (up to 6x more than competitors) throughout the customer's shopping journey, which allows us to confidently approve **97% of orders automatically.**

With automated reimbursements and indemnification protection, you're able to confidently fulfill more orders without worrying about potential losses or liability.

Real-Time Analytics
Gain unmatched insights from 200+ real-time signals from the customer's shopping journey

Card Testing Blockades
Block malicious email domains, phone numbers, CCNs, IPs, etc. that are used for card testing

Dynamic Checkout
Capture only the amount of billing information required based on the risk-level of transactions

Micro-Authentication
Require additional verification from higher-risk transactions to securely approve more orders

reCAPTCHA
Prevent bot network attacks without impacting the shopper experience
