From deduping to importing and even migrating data, Cloudingo makes it easier to manage your Salesforce org and do your job.

Data cleansing and management for Salesforce

## Make quality decisions based on quality data

Cloudingo is a cloud-based, deduplication, and data quality tool customized for Salesforce that cleans and helps make sense of your data. With Cloudingo you can eliminate redundancies and consolidate data so that business decisions are based on facts, not hunches.

### Clean and dedupe records

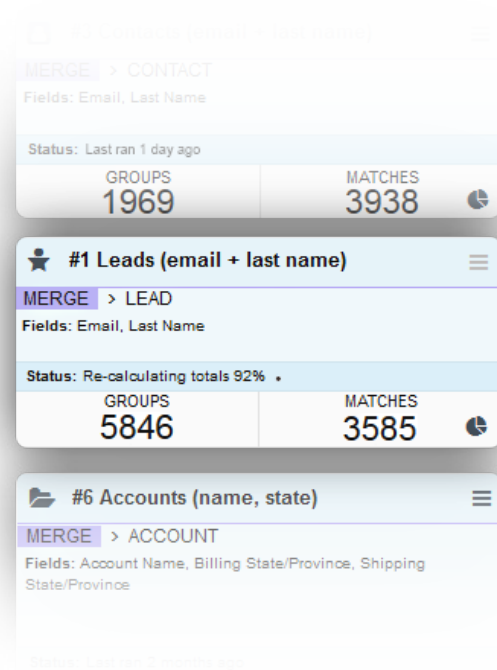

Get rid of duplicate records and spend less time digging to find the right info.

### Remove confusion and guesswork

Update, transform, and standardize data making it more reliable and easier to digest.

### Create a single source of truth

Tie outside data sources to Salesforce, like ERPs or marketing automation systems.

“We adopted Cloudingo particularly to dedupe list imports. We quickly found many more uses for it. We’ve grown a lot in the past few years, and Cloudingo has helped us keep our data in line as we grow.

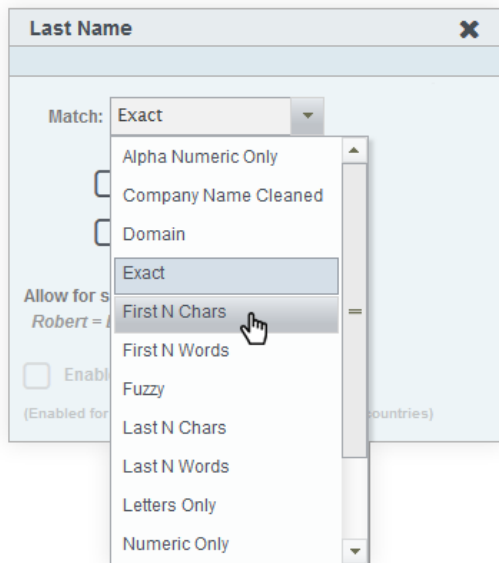

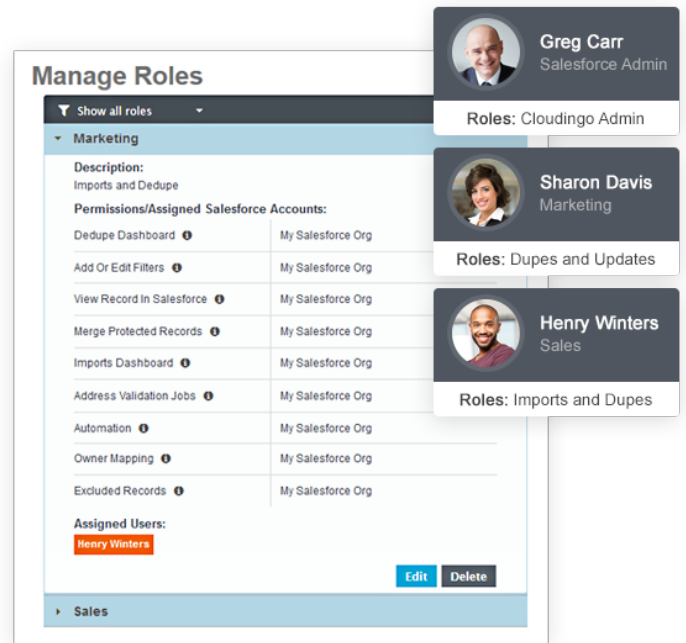

After two years of using Cloudingo we’re still finding effective ways to utilize it.”

STEVEN WATKINS, FORMASSEMBLY

# Save time, don't waste it

Check repetitive tasks off your list. From deduplication to importing to transforming, Cloudingo has all the tools you need to win at Salesforce data management.

- Conquer common hurdles native to Salesforce like duplication, inconsistencies, data decay, and human errors.
- Schedule Cloudingo to work automatically, even when you're not at your desk.
- Share the workload with team members using permissions-based logins so that users only access what you want them to.

## A platform that's as flexible as you need it to be

No tinkering with complex code or spreadsheets. Cloudingo is powerful yet easy to use and is completely customizable to accommodate the unique, complex nature of your dataset.

- Drag-and-drop builder makes it simple to set up and configure Cloudingo
- Templated filters with field-level customizations give you total flexibility and control
- Keep tabs on your data management with detailed reporting for auditing and security

# An All-in-One Data Management Platform

Cloudingo has everything you need to clean and manage your Salesforce org.

## ✓ Merge and convert records

Merge duplicate records without losing data like opportunities, attachments, and history. Convert Leads to Contacts.

## ✓ Maintain complete control

Control how records are merged using customizable filters, flexible rules, and various matching styles.

## ✓ Automate on a schedule

Make sure your data is always free of duplicates. Schedule Cloudingo to run in the background and work for you.

## ✓ Collaborate and track changes

Control access to Cloudingo with permissions-based logins. Stay informed on how data is modified.

## ✓ Restore erroneous merges

Unmerge Salesforce records that were previously merged in Cloudingo and return them to their original state.

## ✓ Monitor with detailed reporting

Keep tabs on your data cleansing process so you can identify trouble areas and stay ahead of dirty data.

## ✓ Dedupe import files

Upload .csv files and scan for duplicates, create new records, and update ones that already live in Salesforce.

## ✓ Find and export data

Match data on a .csv file to records in Salesforce and pull back any data points from Salesforce into an exportable report.

## ✓ Transform and update fields

Update, delete, and manipulate fields for large groups of records using customized rules.

## ✓ Validate & standardize addresses

Stop losing money by mailing to undeliverable addresses by verifying and appending U.S. addresses.

## ✓ Connect systems via API

Shuttle data from your ERP through Cloudingo to Salesforce to leverage master data management systems.

**Start a free 10-day trial today!**

With a powerful yet easy-to-use platform, cleaning and managing Salesforce data has never been easier.

\*Pricing is per Salesforce org, billed annually, and not tied to the number of Salesforce users. Organizations with 300,000+ total records (across Leads, Contacts, Accounts, and Person Accounts, and custom objects if applicable) are subject to a record count fee of \$100 for every 100,000 records above 300,000.

# Security

## How Cloudingo Works

When records are modified in Salesforce, the Cloudingo agent (which is 100% Force.com and sits inside Salesforce) looks at what filters the user has setup inside the Cloudingo Web Portal. If the records are in the scope of the filters, the agent logic fires.

When you click on a group of duplicate records, Cloudingo makes a real-time API call to Salesforce to show you the records side-by side. Once a merge takes place, the Cloudingo Web Portal calls the native merge command.

The actual data is not cached, so as soon as you move off that screen, your data only exists in Salesforce.

## Access to Data

We receive some stats from Cloudingo, but they are only raw numbers based on the filters within our application. (This is equivalent to Salesforce knowing how much data is stored in the org.)

From our logs, we can report on the configuration of Cloudingo filters as well as their results in terms of raw numbers (numbers of duplicates identified), but no other details.

Furthermore the Cloudingo team members cannot see your data. The only exception is if you grant our support engineers Support Access to the Cloudingo Agent so that they can login and troubleshoot issues.

## Data Storage

Cloudingo stores very little data, only field maps and the data from the primary field used to establish matches.

When opening a group of duplicates, Cloudingo makes a real-time API call to Salesforce to display the field data to the user. Once the group is closed, the data is released.

Salesforce credentials are stored in Cloudingo. They are fully encrypted. Once saved, they can be updated but never viewed again.

## Resources and Data Usage

When the merge grid is viewed in the Cloudingo Web Portal, Cloudingo employs a sophisticated algorithm to make a secure Salesforce API call (via either OAuth or with

the stored AES 256 encrypted credentials for the user) to pull the data in real-time for user review. Cloudingo uses the minimum amount of resources possible while balancing the actual speed of the responses back from Salesforce.

Cloudingo strives to get the most out of every API call so that any other applications or custom codes in Salesforce you may use also have plenty to work with. This is why we work hard to performance tune the native agent and save resources whenever possible including CPU cycles, heap size, message size, DML rows, bulkified triggers, etc.

Cloudingo automatically switches between real-time index mode and batch index mode based on user preferences and available resources. You can also easily apply hard limits on resources.

## Highest Standards

Any and all information that you see and interact with inside Cloudingo is protected using industry standard 256-bit SSL encryption.

Every year we have passed Salesforce's intensive audit without fail. Internally we perform security audits each time a release goes out (often times more frequently).

## Servers and Compliance

The web portal runs on a SAS-70 type II compliant infrastructure at one of the nation's largest hosting providers. Cloudingo is hosted inside of this data center on dedicated servers with dedicated firewalls. All the standard physical security features are present: biometric access controls, intrusion detection, redundant power feeds and generators, fire suppression, climate control, etc.

The Cloudingo servers are whitelisted, and the Salesforce servers are the only servers allowed to communicate with the Cloudingo web service end-points. In addition, our company, our team and all of our hardware are located in the USA. We do not outsource anything.

## About us

We deliver a full range of data management and data quality tools and services, from data cleansing, and integration, to deduplication, enabling users to realize the full potential of cloud-based and service-oriented architectures (SOA). Our mission is to provide customers with resources to manage the exponential growth in data, saving time and money and adding efficiency.

We're a certified Salesforce ISV (Independent Software Vendor) company. This means we must meet Salesforce's strict partnership requirements, including periodic security reviews. We proudly exceed the vigorous security standards every year. For you, this means that you can trust that you're working with a loyal, trustworthy company.
